

## **Hardware Specification:**

The specification for the target computer system is as follows.

### **Minimum Specification for PC.**

1. Intel Celeron / Pentium Processor 1.6GHz or higher ,128K cache, 400Mhz FSB
2. 256MB ram
3. 40GB hard drive
4. CDROM drive
5. 10/100Mb network connection
6. Keyboard & Mouse
7. Minimum 2 spare USB ports, 1x serial port and 1 x parallel port.

**Please note:** The PC must have a parallel port for the Receipt Printer

### 2. Software specification:

- 2.1 Operating system “Windows XP”, W2K
- 2.2 Installed with Excel and Access.

### **Networking:**

IdentiTrip software can be networked with the “database” residing on a Server. Each client computer is required to have the application software installed on it but not necessarily the hardware elements. (scanner, web cam and printer). This is not a true client / server application but enables multiple users to access a common database.

### **Back Ups & Disaster Recovery:**

It is important to recognise that the IdentiTrip application software can always be re-installed but should anything happen to the database, then all registration, photographs and trip history will be lost. The database **must be backed up on a regular basis** if the installation has been carried out on a stand-alone computer system. The database folder location will be confirmed to your IT manager who will be able to do this for you.

If the computer system is part of the schools intra-net, the database can reside on the school server which will be backed up on a daily basis.

Disaster recovery is supported by Pinecone Associates and (re-installation of IdentiTrip) is specified in the service level agreement.
